

SUBJECT: Science

GRADE: 2nd grade

TEACHER: Natalia Davila, Carroll Vergara.

Name: _____

Date: _____

Course: _____

Score: _____

OUTCOME #2: Identifies and explains how living things grow and change through life cycles, distinguishing living and non-living things and recognizing fossils as evidence of living things from the past.

1. How do animals grow?

- A. They eat and grow bigger
- B. They stay the same
- C. They disappear

2. correctly lists each step in the life cycle

3. Which helps people grow healthy?

- a) Eating vegetables and sleeping well
- b) Eating candy every day
- c) Not sleeping

5. What is a fossil?

- | | | |
|-------------------------|---|----------------|
| A.) A toy in the ground | B.) A bone or shape of a plant or animal from long ago | C.) A new rock |
|-------------------------|---|----------------|

6. Where can we find fossils?

- | | | |
|--------------------------|--------------|--------------------|
| A.) In a bottle of water | B.) In rocks | C.) In our clothes |
|--------------------------|--------------|--------------------|

OUTCOME #3: Describes plant structures and explains how plants grow and reproduce through photosynthesis and pollination using diagrams and simple investigations

7. Put the life cycle in order (1–4):

___ Plant

___ Seed

___ Flower

___ Small plant

8. Why is pollination important?

A. Plants can make new seeds

B. Plants can jump

C. Plants can talk

9. What happens if there are no bees?

A. Plants grow faster

B. Plants cannot reproduce easily

C. Nothing happens

10. Match the situation with what is happening:

1. A bee visits flowers

2. A plant makes seeds

3. No insects visit the flowers

a. The plant cannot reproduce

b. Pollination happens

c. New plants can grow
